

### FBS-6 Articulating Borescopes

A flexible borescope with a 10,000 element image bundle made here in the USA. The FBS-6 models are an ideal choice for viewing otherwise inaccessible areas. They feature an objective end tip that can be deflected  $\pm 180^\circ/\pm 120^\circ$  in either 2-way or 4-way articulation using a control knob next to the eyepiece housing. This enables easier positioning around elbows and bends in the work piece while enhancing the viewing area. FBS-6 Series borescopes offer internal and fibreoptic illumination options and are video adaptable.
